Representational State Transfer (REST) is a software architectural style that defines a set of constraints to be used for creating web services. Web services that conform to the REST architectural style, termed RESTful web services, provide interoperability between computer systems on the Internet. RESTful web services allow the requesting systems to access and manipulate textual representations ...

We can next transform the notebook into a web app that retains our layout and can be deployed outside our notebook authoring environment. One option allows us to download a zip file containing the frontend assets for our dashboard, a Dockerfile for building it into a container, and a manifest for pushing it to Cloud Foundry.
